 - Congratulations.....17
- School News.....18-20
- Meet the International MPH class of 2019/2020.....20

Message from Prof. Yehuda Neumark, Director, Braun School

Well, the 2019-2020 IMPH cohort has arrived and the school year has begun, so I finally sat down to prepare my opening lecture in our Principles and Uses of Epidemiology course. Thinking about what to focus on, I came across a [brief article](#) by the Executive Director of the European Public Health Association (EUPHA) Dineke Zeegers-Paget, in which she addresses what are, in her opinion, the public health challenges in the coming decades [1. changing demographics in Europe, 2. technological and digital revolution, 3. political influence on public health, 4. influence of vested interests, 5. influence of vested interests]: "*As Europe enters the third decade of the 21st century, we have never been healthier and advances in knowledge and technology have enormously improved our ability to prevent and treat current diseases. Yet there are warnings of developments that could, ultimately, threaten the future of humanity.* And she concludes her remarks with the following advice: "The 21st century public health professional needs to be smart, persistent and creative, be able to be a diplomat and a negotiator at the same time". Dineke, you have thrown down the gauntlet as far as public health training, but you also succeeded in scaring me to death!

I then saw the [CDC's 10 "most important public health problems and concerns"](#) (listed alphabetically):

- Alcohol-related harms
- Food safety
- Healthcare-associated infections
- Heart disease and stroke
- HIV
- Motor vehicle injury
- Nutrition, physical activity and obesity
- Prescription drug overdose
- Teen pregnancy

At least the largest democracy in the world allows you to choose your vice and road to disease and death – alcohol, drugs, tobacco, sex, junk food, fast cars...

Then, as if I wasn't sufficiently depressed, up pops the WHO's list of "[10 threats to global health in 2019](#)" which opens with these cautionary words: *"The world is facing multiple health challenges. These range from outbreaks of vaccine-preventable diseases like measles and diphtheria, increasing reports of drug-resistant pathogens, growing rates of obesity and physical inactivity to the health impacts of environmental pollution and climate change and multiple humanitarian crises".*

Listen to the Doomsday Clock tick ever closer to the end of the world as we know it!! Here, by the way, is the WHO's list:

- | | |
|-------------------------------------|--|
| 1. Air pollution and climate change | 6. Ebola and other high-threat pathogens |
| 2. Noncommunicable diseases | 7. Weak primary health care |
| 3. Global influenza pandemic | 8. Vaccine hesitancy |
| 4. Fragile and vulnerable settings | 9. Dengue |
| 5. Antimicrobial resistance | 10. HIV |

Unable to find a Prozac pill (I must have finished them preparing for a different course!), I decided to go biking, which had a wonderfully calming effect and allowed me to refocus my perspective until I reached a hill which took me 15 minute of hard pedaling to climb and less than 2 minutes to descend, only to face another steep hill (elevation screenshot below), which is when I came to the realization that work is futile (it might have been the lack of oxygen, but I could swear I saw Sisyphus winking at me in the distance), so I returned home, finally found a damn pill, and when the effects of the alcohol began to kick in (did I forget to mention that I washed down the Prozac with a shot, OK, a double-shot of whiskey?), I had an epiphany!

It would be tremendously informative to hear from you, dear Alumni, about what you think are the major public health challenges facing the world, or at least your country/region. I mean there are hundreds of you around the world working in all kinds of organizations and positions, with varying degrees of experience - you are a veritable global convenience sample of public health practitioners! So, I asked Reut to prepare a short online survey and share the link with all of you to complete. To be honest, I didn't have a chance to ask her yet, but I am fairly certain she is proofreading this (Hi Reut! Please prepare... Thanx!).

[Reut: This is one way of conveying a message. Lol!]

There you go: <https://forms.gle/7SXYbipf7X1EFaS99>

It will be very interesting to see what we come up with, although it is slightly biased now that you have seen the WHO's, CDC's and EUPHA's choices, so please delete them from your memory [those of you who were at the recent Health Policy Conference on Innovations heard about the amazing, and amazingly scary research being done on implanting "fake memories" into the brains of mice, so altering brain information in humans is just around the corner! Oh G-d, I need to find another Clonex (did I forget to mention that I took one shortly after the Prozac-whiskey cocktail?)]. OK, so we will share the link, and when we reach the desired response rate (I will be realistic and would be satisfied with anything over 99%), we will summarize the findings and report back to you in the next newsletter. I'm telling you, this is going to be amazing!! Make sure you are one of the "positive deviants" and respond early!!

Well, speaking with you, dear Alumni, has been fun, but I still haven't prepared the opening lecture, and now I am too excited to concentrate, so I'm going biking!

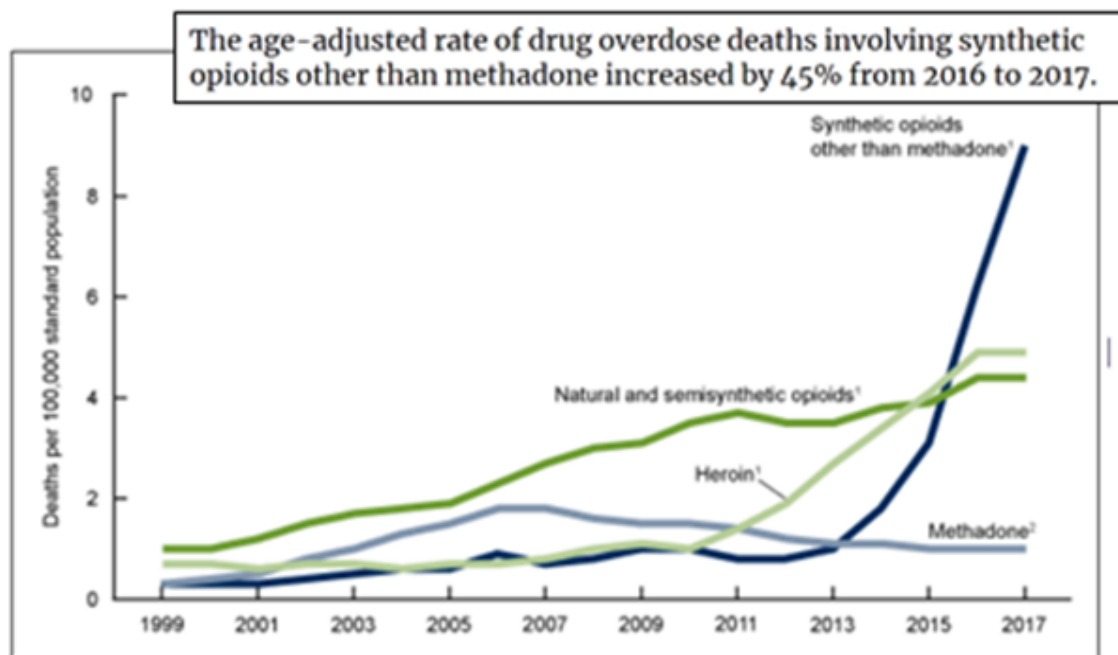

Wishing all of us optimal physical, mental and spiritual health (in whichever order is most meaningful to you)!

Yehuda

*Left to right: Prof. Yehuda Neumark, Prof. Ronit Calderon-Margalit,
Amb. Gil Haskel (MASHAV), Ms. Dina Gidron (Pears Foundation)*

Figure 4. Age-adjusted drug overdose death rates, by opioid category: United States, 1999–2017

https://www.cdc.gov/nchs/images/databriefs/301-350/db329_fig4.png

p.s. Although I was joking about the pills and alcohol, addiction is a very serious problem and one which deserves much more attention than it receives. A few days ago I was updating my slides for the opening lecture of my course on addictions for medical students) and was reminded of just how big the challenge is: globally, nearly 200 million people have an alcohol and/or drug use disorder! In Eastern Europe and the USA around 1-in-20 adults suffer from drug and/or alcohol dependence (not including tobacco). According to the most optimistic estimates, only 1 in 10 people with addiction receive treatment, and relapse rates are estimated to be 40-60% and even as high as 80%. As a result, ~320,000 deaths globally were attributed to a substance use disorder in 2016 (and that's only the reported and recorded cases). I insert here just one slide showing the death rates resulting from the "opioid crisis" in America, which shows little sign of abating. So, really it is no joking matter!

Message from Dr. Maureen Malowany, IMPH Alumni Academic Coordinator

Dear Alumni,

We have said our goodbyes to the 44th Graduation Class as we welcomed them into our IMPH Alumni Family. This week we welcome our 2019-2020 cohort. I am sure for all of you there are memories of your early days here that surface as we come into the beginning of another academic year. We were thrilled to have 14 alumni with us for the International Health Policy Conference, September 2019 and delighted that a number were able to stay on for graduation. We made new friends and renewed other friendships.

In these next months, we are thinking of innovative ways to bring the IMPH training foundations to those who are unable to attend the IMPH academic year in Jerusalem. One of our 'locales' could be Botswana – supporting alumni from the region to come to Botswana to run training sessions there. We have the personnel – funding is always the challenge. Please be in touch if you have any ideas on that front!

A number of Pears Seed Grant programs are up and running. We will have alumni tell us about their work in the next newsletter. As a reminder, the Pears Seed Grant award is open in terms of application. Let me know if you have a research project in mind! Your professional development is also at the forefront of our planning. Enjoy reading Dr. Jordan Kyongo's piece in this newsletter.

Wishing you every success in your endeavours over these months,

Warm regards,

Maureen

Right to left: Dr. Lelani Chikanda (Botswana | IMPH 2019, Dr. Maureen Malowany, Dr. Emman Ajidagba (Nigeria | IMPH 2019) and Mrs. Victoria Akinola, his mother.

Message from Reut Kramer, IMPH Alumni Communications Coordinator

Dear Alumni,

It seems like the IMPH class of 2019 has just arrived, and in a blink of an eye they are already gone. These graduates have recently joined the alumni platform and the WhatsApp groups. We are delighted to welcome them into the IMPH Alumni family!

We welcome International MPH class of 2020 (IMPH 45) to the Braun School and to Israel!

We were so excited to welcome 14 alumni to the NIHP Health Policy Conference held in Jerusalem in September 2019 and for the graduation event. It is absolutely heartwarming to see them visit the School and meet their former teachers, some classmates and other alumni from many countries and different cohorts. Amazing how this shared experience overcomes distance and time in forming new connections and strengthening old ones. We are grateful for Pears Foundation and the NIHP for supporting our alumni to travel to Israel. We encourage all alumni once again to take part in our academic and social activities, here in Israel or elsewhere.

We are happy that so many of you share with us your career achievements and significant life events and even more delighted to share the good news around! Communication with alumni is easier than ever, and we are glad to receive updates from you, information about your work and to see how networking among alumni is flourishing. Our [Alumni Social Platform](#) has been upgraded and now it is much more user-friendly. It is so easy to contact a colleague or find a mentor through there. Check it out!

Warm regards to all,

Reut

*Reut Kramer with Dr. Anders Felipe Izquierdo
(Colombia | IMPH 2019)*

International MPH 44th Graduation Ceremony

On September 18th, 2019, we had the pleasure of celebrating the International MPH 44th Graduation Ceremony.

The 2019 graduating class consisted of 22 graduates from 18 countries. Most attended the ceremony in their national costumes, as it is custom and tradition in the International MPH Graduation Ceremonies. With this graduating class, we now have 901 alumni from 102 countries!

The ceremony opened by Prof. Ronit Calderon-Margalit, Director, IMPH Program. Greetings followed from Prof. Barak Medina, Rector, Hebrew University of Jerusalem; Prof. Dina Ben-Yehuda, Dean, Faculty of Medicine, Hebrew University of Jerusalem; Mr. Oron Levy, Senior Deputy Director General, Hadassah Ein Kerem Hospital; H.E. Ambassador Gil Haskel, Head of MASHAV, Ministry of Foreign Affairs.

Following the greetings we heard the graduates sing “Halleluya,” accompanied by Dr. Emman Ajidagba on the piano.

We had the privilege of hearing our Keynote Speaker, Dr. Frank Anthony (Guyana | IMPH 2000), former Minister of Culture, Youth & Sports, Guyana; advocate and legislator for public health, food safety, human rights & child protection; PANCAP Champion of Change for HIV/

AIDS in the Caribbean. Dr. Anthony discussed the benefits of the MPH degree in his career. His talk presented the graduating class with a broad perspective of the multiple uses for their newly-obtained public health skills.

Prof. Ruth Kark, wife and life-partner of Prof. Jeremy Kark z"l, presented the Jeremy D. Kark Legacy Prize for Academic Excellence to Dr. Stella Njeri Kanja of Kenya. Stella also represented the 2019 International MPH graduating class with her colleague Dr. Sailosi Kato Soqo of Fiji, in thanking the IMPH faculty and administrative staff, as well as our generous donors for their support.

Prof. Yehuda Neumark, Director, Braun School of Public Health and Community Medicine, gave his closing remarks which concluded this festive event. A reception was held after the ceremony in honour of our graduates, their guests and alumni attended.

Highlighting Alumnus / Keynote Speaker

Dr. Frank Anthony (Guyana | IMPH 2000)

Dr. Anthony has practiced medicine in Guyana since 1993. After graduating from the Braun School of Public Health in 2000, he became the Executive Director of the Health Sector Development Unit, responsible for the reorganization of Guyana's health sector. Dr. Anthony has served as Project Manager for the World Bank-funded HIV Prevention and Control Program, Project Manager of the Global Fund Grant on HIV, TB and Malaria and numerous programs under the Inter-American Development Bank in nutrition, health sector policy and development.

As a Member of Parliament of Guyana, Dr. Frank Anthony spent twelve years inspiring and enabling legislation in public health, food safety, human rights, child protection, youth, sports and culture. Dr. Anthony served as Guyana's Minister of Culture, Youth and Sports from 2006 to 2015.

Dr. Anthony is currently in clinical practice and teaches at the University of Guyana as an Adjunct Professor in Public Health. He also consults for several organizations in the area of public health. Dr. Anthony has been elected as a Member of the Guyana Medical Council and was recently appointed as PANCAP's Champion of Change for his work on HIV/AIDS in the Caribbean.

Dr. Frank Anthony (Guyana | IMPH 2000) with Mr. Jacob Schreibman, his Master Paper mentor.

Report: Jordan Kyongo, PhD—Pears Seed Grant Update

According to Balas (not to be confused with our beloved Prof. Mario Baras J) & Boren (2000) it takes about 17 years to turn 14% of original research to the benefit of patient care. That “know-do” gap is unacceptably huge and it basically means that while there are many people who work hard to come up with innovative solutions to public health challenges, there are even more people who are still suffering while these solutions stay wrapped on the shelf in

their shiny little packages. That’s the gap that the discipline of **Implementation Science** attempts to address – how do we get necessary services to those who need it *quickly, efficiently* and with *quality*? The solutions don’t come easy and involve application of scientific rigor to four main domains i) Intervention (what is the evidence base for it?) ii) Delivery system (what is the delivery system, how to implement a new intervention in this delivery system?) iii) Target audiences and stakeholders (who needs the interventions, how do they access?) iv) What is the broader context? (Disease profiles, inequities, etc will differ in different countries and regions). In brief, it is the **science** of implementation.

I have spent many years doing research (basic science and operations research). Through the years, I developed a passion to improve research uptake and its utilization to improve policy and programming. The Pears Family Foundation graciously funded me to attend a one-week Intensive Course in Fundamentals of Implementation Science in Global Health at the University of Washington in Seattle, WA, USA. Lessons from this course have been fundamental in my role as Co-Chair of the Research Sub-Committee in the Kenya National HIV Pre-Exposure Prophylaxis (PrEP) Technical Working Group where I facilitated the implementation of a learning forum that brought together researchers, health care workers, PrEP users and policy makers to learn how the PrEP programme can be improved by PrEP research conducted in Kenya. I continue to utilize these skills at DFID’s East Africa Research Hub where we support evidence-informed programming by DFID across East Africa. To draw a parallel, the Pears Family Foundation not only supported the “innovation” end of our careers (with the IMPH scholarships) but they continue to support us to effectively utilize the “toolbox” we left Israel with – through supporting our professional development, providing seed grants, funding regional alumni meetings and so on. I appreciate their support and I am inspired to serve and to make an impact in whatever my hands find to do.

- Dr. Jordan Kyongo (Kenya | IMPH 2009)

NIHP Conference in Jerusalem, September 2019: Alumni Write

Shalom from Sweden! It was really a great pleasure for me to come back to Israel, to Jerusalem and to Hadassah.

To be able to meet again after 26 years Jaime and Rosa Gofin as well as Yehuda Neumark remind me many good memories of my times under my year in the MPH.

During the Conference I was able to share my experience with many people from all over the world, I got re-connected to the Latin-American network of ex-alumni, got new friends and discussed cooperation.

It was good to hear and to discuss the positive and potential negative consequences of the digitalization of health services; however, high focus was on rich groups and countries that can afford high technology.

It was interesting to hear about the future of the health care systems, such as increasing the role of primary health care services to reduce hospitals costs, new demands (like fast growing ageing population with high expectations, new diseases due to globalization, less budget, and lacking health care workers).

One more time, toda raba for allowing me to have this great experience!

-Dr. Allan Richard Dale (El Salvador | IMPH 1993)

From Sept 12th –Sept 27th I was able to be back in Jerusalem after almost 25 years (January 1996) and It was a great experience.

I attended the International Health Policy Conference, full of interesting topics during plenary sessions, group sessions and posters. I was also able to present my work at the conference.

Seeing the place where we lived for a year and some of the teachers was really special. But sharing this time among some of the alumni was something really worth to experience.

Even that we did not study in the same year, we felt like if we have known each other for years, and the reason to feel this way was because the Braun School of public health though the MPH program besides providing us academic knowledge taught us to be smart, caring and creative and we learned that we are people who is part of a worldwide MPH family of professionals and besides this, the school staff has made an extra mile to keep us connected.

So, I went back home, I went back to learn in Jerusalem, to connect with the university staff and my MPH colleagues. This is a time that I will remember for another few years with great satisfaction because I achieved more than what I expected.

Thanks to all the School of Public Health Staff who made this trip possible. You rock! And now the ball is back in our field. This is a new stage in our lives to connect us more, to collaborate among ourselves as we have never have done before in order to make this a better world.

I and another MPH colleague from the Florida University will begin to develop some activities through tele-education where we will be connecting those former MPH who are interested in participating.

We now live in the best time ever where we will enjoy the era of communications and we need to take advantage of it.

Shalom and this is just the beginning of greater things.

- **Dr. Sandra Gomez Ventura (Honduras | IMPH 1996)**

“Amazing, overwhelming, terrifying, life-changing...” These are just some of the words that were used during the conference to describe innovations in healthcare and... I agree! This conference was a wonderful opportunity to discover a whole world of possibilities and see how technology, innovation and research have grown in the healthcare field, towards improving healthcare worldwide. However, there is still an implementation gap between all the research, the technological advances and what it is generally practice, and I think that finding ways to close this gap through an innovative thinking is key. Being in Israel and in Jerusalem again was unforgettable. Getting to connect with the IMPH alumni, the graduating class and the faculty members was a true gift and I am thankful for all the support given to us so we could be part of this life-changing experience. Innovation is not a synonym of technology, but it is a synonym of stepping out of our comfort zone and do the work for the greater good. Thank you for this opportunity and I look forward to more opportunities to connect and collaborate as part of the IMPH family. Shalom!

-**Dr. Luz Angela Torres Lopez (Colombia | IMPH 2018)**

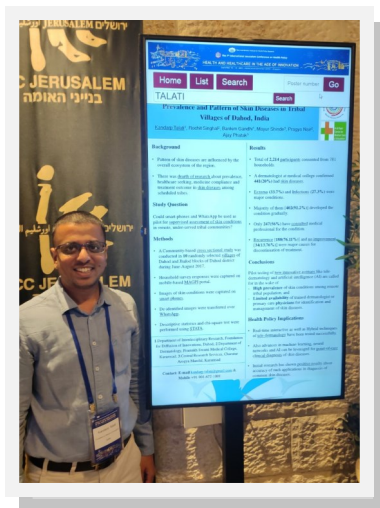

Dr. Allan Richard Dale (El Salvador | IMPH 1993), Dr. Sandra Gomez Ventura (Honduras | IMPH 1996) and Dr. Luz Angela Torres Lopez (Colombia | IMPH 2018) at the Old City of Jerusalem

Degrees and Awards

Congratulations to **Dr. Vinita Sharma (Nepal | IMPH 2011)** upon receiving her PhD from the University of South Florida!! Her dissertation explored the risk and resilience factors pertaining to mental health of youths attending a college in post-earthquake Kathmandu. What a great accomplishment, Vinita. We are so proud!

Kandarp Talati's (India | IMPH 2017) poster presentation was awarded 2nd place in the International Conference on Health Policy - Health and Healthcare in the Age of Innovation that was held in September 2019 in Jerusalem.

Well done, everybody!

Congratulations!

A heartfelt mazal tov to **Dr. Obichi Obiajunwa (Nigeria | IMPH 2015)** and his wife upon the arrival of their baby girl! All our best wishes on this joyful occasion!

A belated Mazal tov to **Dana Opas (USA | IMPH 2015)** and **Nina Lavi (USA | IMPH 2015)** who married a year ago. We wish Dana, Nina and their spouses a lifetime of joy and happiness!

Mazal tov to **Dr. Alexis Nizigiyimana (Burundi | IMPH 2019)** upon his recent marriage! All our best wishes to the newlyweds!

School News

In mid-September we were honoured to unveil the Kark Legacy plaque at the entrance of the Braun School commemorating the contributions of Prof. Sidney and Dr. Emily Kark and Prof. Jeremy Kark to global public health and to the establishment and development of the Hebrew University-Hadassah Braun School of Public Health. We are extremely grateful to Prof. Ruth Kark and the Kark family for establishing the IMPH Jeremy D. Kark Legacy Prize for Academic Excellence, this year awarded to Dr. Stella Kanja from Kenya for achieving the highest overall GPA in the 2018-2019 IMPH class.

The Hebrew University-Hadassah Braun School of Public Health and Community Medicine is very proud to have been awarded a grant from The Association of Schools of Public Health in the European Region-ASPHER to carry out a *This Is Public Health* social media campaign. The aim of the campaign is to enhance the visibility of public health and opportunities for careers in public health among potential students to reinforce the current public health workforce.

The campaign will be headed by Braun School's Dr. Yael Bar-Zeev, Prof. Hagai Levine & Prof. Yehuda Neumark, in partnership with the other Schools of Public Health in Israel.

هذه هي الصحة العامة זו בריאות הציבור This Is Public Health

**THIS IS PUBLIC
HEALTH.**
thisispublichealth.org

We are so proud of Professor Ora Paltiel who received the Nefesh B'Nefesh Bonei Zion Prize recognizing the achievements and contributions to the State of Israel by outstanding Anglo immigrants to Israel. Mazal Tov Ora on your past achievements and may you be blessed with energies and motivation to continue contributing to your patients, students, colleagues, family, Israeli society, the Middle East, and the global medical and health world.

The Braun School is proud of award-winning Faculty members and students who were honoured at the Faculty Excellency Awards Ceremony for 2019.

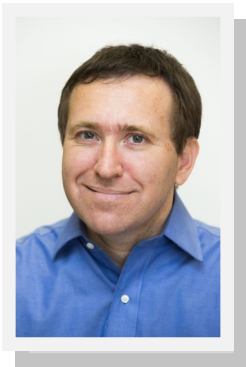

Award recipients include:
 Prof. Orly Manor - for excellent pre-clinical teaching;
 Dr. Shai Carmi - for excellent research work;
 Dr. Raanan Raz - for excellent teaching development;
 Dr. Luz Angela Torres Lopez (Colombia | IMPH 2018) for her excellent thesis!
 Congratulations to all award recipients!

Congratulations to Dr. Osnat Keidar who served as principal Guest Editor of a special edition of the International Journal of Environmental Research and Public Health on "Refugee, Migrant and Ethnic Minority Health". Osnat is also lead-author and co-author on three articles on immigrants in Switzerland. The edition contains nearly 40 articles including one on care-seeking among asylum seekers and undocumented migrant workers in Israel.

A new study publication by Dr. Yael Bar-Zeev, Braun School Faculty, her PhD work in Newcastle, Australia, focused on improving health providers smoking cessation care with pregnant Aboriginal and Torres Strait Islander women. The study found that a multi component intervention was feasible and improved health providers' knowledge and attitudes toward smoking cessation care in pregnancy. Several practices also improved but nicotine replacement therapy prescription rates were unchanged.

Congratulations to Prof. Hagai Levine, Braun School Faculty, upon being elected as Head of the Public Health Physicians Association, part of the Israel Medical Association.

Meet the International MPH Class of 2019/2020!
